

BUDHA DAL PUBLIC SCHOOL
PATIALA ANNUAL CURRICULUM PLAN SESSION
(2025-2026)

CLASS: X SUBJECT: CHEMISTRY

LESSON PLAN

CLASS-X SUBJECT-SCIENCE(CHEMISTRY)

Month-April

Class Transaction-15 Periods

Chemical Reaction and Equations

Objective–

To recognise the physical and chemical processes associated with biological and industrial process.

To understand chemical processes occurring in daily life.

To apply the principle of conservation of mass to balance chemical reaction.

Previous knowledge Testing–

Students would be asked about physical and chemical changes. Daily life examples would be discussed.

Vocabulary Used–

Equations, Reaction, Symbols, Physical states, Combustion, precipitation etc.

Important Spellings–

Precipitation, Combination,
Neutralisation, Displacement, Decomposition, Thermal Photolysis.

Aids/Innovative Methods used to explain the topic–

With the help of Smart Class (Extramarks)

Learning methods and making them learn the formulas of various chemical compounds which would be used in explaining chapters and Smart Class.

Procedure–

Students would be taught firstly the various activities related to types of chemical reactions and then Balancing of Chemical Equations.

Types of Chemical Reactions–Combination

Decomposition

- Thermal
- Electrolyte

- Photolytic

Displacement

Double Displacement

Oxidation and Reduction

Identify Oxidant, Reductants, Oxidising Agent,

Reducing Agents. Many examples for practising would be given to them

em

Participation of Students

Students will be asked:-

To solve/Balance chemical Equation on the Greenboard. Day to

day life examples related to chemical reaction.

Combination Reaction

Decomposition reaction

Single displacement reaction

Recapitulation–

From the above topics, following point would be cleared to students.

Electrolysis of water

Thermal decomposition of many compounds

Oxidation of saline and many metals when kept in air, why they become black

Use of Agar in photography

Acid, Base Neutralization Reactions

Assignments–

NCERT Intext and Back exercise questions would be discussed in class and given as a homework to students.

Integration With Other Domains–

During chemical reactions, a lot of changes occur in a beaker or test tube. For e.g. Change in colour of solution, change in state of substance or evolution of gas, Test tube becomes hot or cold then chemical reaction occurs.

These all above changes can be correlated with art, related to colour change, Rusting of Iron which occurs in daily life shows a change in colour, Texture of iron to form rust.

Balancing of chemical equation can be done with the help of Mathematics.

Resources–

SmartClass, Extramarks, NCERT Book, Reference (Pardeep's Publications)

www.learncbse.in, byjus.com, [youtube](https://www.youtube.com)

Learning Outcome –

Students would be able to know:-

- ? A complete chemical equation which represents the reactants, products and their physical states symbolically.
- ? A combination and decomposition reaction.
- ? Exothermic and Endothermic reaction.
- ? Rusting and how it occurs.

Coscholastic activities-

Activities of Chemical Reactions And Equations–

1. Burning of Magnesium Ribbon

2. Mixing of Lead Nitrate and KI solution

3. Action of HCl on Zinc Metal

4. Action of Quicklime on water

5. Heating of FeSO_4 Crystals

6. Heating of Lead Nitrate Crystals

7. Reaction between Copper Metal and FeSO_4 Solution

8. Mixing of BaCl_2 and Na_2SO_4 Solution

9. Decomposition of AgCl in light

Feedback/Remedial Teachings—

- Discussion and written practice of fill ups, Assertion Reasons, True/False, Matching Statements, Multiple choice Questions, one word Questions will be done

- Oral discussion and written tests will be conducted

Inclusive Practice and Full Participation without Discrimination

Lesson would be taught equally to all students without any discrimination. All students would be treated the same regardless of their economical status.

LESSON PLAN
CLASS-X SUBJECT-SCIENCE(CHEMISTRY)

Month-May/July

Class Transaction-22 Periods

Acids Bases and Salts

Objectives–

To learn the chemical properties of acids and bases.

To describe the methods of preparation, properties and uses of Bleaching Powder, Baking Soda, Washing Soda and POP.

Previous Knowledge Testing–

Students would be asked about common acids, bases, salts and their nature and indicators like red litmus, blue litmus.

Vocabulary Used–

Phenolphthalein, Methyl orange, Olfactory Indicators, Ph of
Salts, Bleaching Powder, Washing Soda,
Plaster of Paris.

Important Spellings–

Phenolphthalein, Bleaching Powder, Olfactory
Indicators, Sodium bicarbonate

Alternate Methods Used–

Smart Class

Show activities in lab B

lack Board

Procedure–

Students should be taught about effect of blue litmus, Red litmus, Phenolphthalein, Methyl Orange, indicators on solutions of acids / bases. Properties of Acids and Bases and their reaction with metals, metal bicarbonates with each other, metal oxides with acids, non-metallic oxides with bases.

Students should be taught about what happens when acid or base is added in a water solution.

Strength of Acids and bases with the help of pH paper.

Preparation of NaOH, Bleaching Powder (CaOCl_2), Baking Soda (NaHCO_3), Washing Soda ($\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$)

And POP ($\text{CaSO}_4 \cdot \frac{1}{2}\text{H}_2\text{O}$)

Recapitulation–

Students will be able to tell about all the properties of acids and bases.

They would be able to understand properties of all chemicals from common salt.

Integration With Other Domains–

Concept of acids and bases can be correlated with Biology.

We can find pH

of edible substances and things like saliva etc. Some plants are acidic and basic in nature. They can be put to various uses based on their nature.

This concept can also be integrated with Art because acids/ bases give different colour with different indicators.

Resource-

www.learncbse.in, byjus.com, youtubeL

Learning Outcomes –

Students would be able to:-

Compare chemical properties of acids/bases.

pH of given solution and its importance in daily life.

To describe preparation of different salts and their uses in everyday life

Assignment–

NCERT question/Answers would be discussed and given as Homework.

Coscholastic Activities–

Collect samples of salts and see the change in colour of acid/base indicators:-

- Red Litmus
- Blue Litmus
- Methyl Orange

Acid – Base Indicators

Methyl Orange Indicator

In Acid

In Base

For example, phenolphthalein is **colorless** in its HIn form and **pink** in its In^- form.

Action of H_2SO_4 on Zn granules and test for H_2 gas.

Reaction of Metal Carbonates and metal hydrogencarbonates with acid like HCl and test for CO_2 gas.

Fig. 3 Reaction of dil. HCl with sodium carbonate

Reaction between NaOH/HCl

Activity to show that solution of acids i.e. HCl, H_2SO_4 conduct electricity and solution of glucose, alcohol does not conduct activity.

Strength of Acids and Bases with help of pH paper.

Activity to show the acidic, basic, neutral nature of salts with the help of pH paper.

Heating of crystal of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$

Preparation of Gypsum and tell how it is used.

Feedback and Remedial Teachings–

- Remedial Teaching method to be adopted for students who have fallen behind in studies.
- Retests, Assignment and practice Questions would be given for preparation

Inclusive Practice and Full Participation without Discrimination–

Lesson would be taught equally to all students without any discrimination. All students would be treated the same respectively of their economical status.

Sustainable Development Goals-

By Teaching this Chapter we may prepare students to join the goals of good health and well-being as they come to know the nature of the substances used in everyday life.

LESSON PLAN

CLASS-X SUBJECT-SCIENCE(CHEMISTRY)

Month-July/August

Class Transaction-18 Periods

Metals And Non-Metals

Objectives-

By studying this chapter, students would be able to:-

Understand the difference between metals and non-metals, minerals and ores

Various steps of metallurgy

Chemical reactions involved in extraction of metals
Properties of Alloys

Previous Knowledge Testing-

This lesson requires the following knowledge –

Metals are obtained from minerals and ores

Metals are mined from the earth. They are impure and need to be purified

Alloys are mixed metals

Vocabulary-

Mineral, Ore, Gangue, Roasting, Calcination

Important Spelling–

Electrolyte, Refining, Corrosion, Smelting, Reduction, Thermite Reaction, Alloys

Innovative Methods/Resources–

?Extra Marks/Smart Class

?NCERT Book

?Reference Book (Pradeep's Publication)

?Green Board

?Various samples of metals would be shown to students in the lab

Procedure–

Students would be told about Physical and Chemical Properties of metals and non-metals

Reaction of metals/non-metals would be discussed with H_2O /salts /acids/bases.

Reactivity series would be discussed

Electron dot structure of

compounds Extraction of metals would be discussed

sed

Students Participation–

?

Students would be able to tell the difference between metals and non-metals

?

They would be able to differentiate between various processes of metallurgy.

Recapitulation–

Students would be able to recapitulate:-

The properties of metals and non-

metals Various methods of metallurgy

Students would be able to tell which metal is more reactive and which is less reactive based on their knowledge of reactivity series.

Integration with other domain–

This topic can be correlated with English language and mathematical concept of comparison.

Since metals are lustrous, so it can be related with different colour of art.

Resource-

www.learnbse.in, byjus.com, youtube

Learning Outcome-

Students would be able to state the various steps in obtaining metals from ores.

Can write chemical reactions involved in extraction. Give examples of common alloys.

Process of electrolytic refining with the help of a labelled diagram.

Co-Scholastic Activities–

To see and examine various samples of metals like Na, Mg, Fe, etc. Burning of metals like Mg, Na, etc.

Reaction of Metals with water.

Table 1: Reaction of Metals with cold water	
Metal	Observations/Equations
Potassium	- Reacts very violently; explodes with cold water - Enough heat is produced to ignite the hydrogen gas produced - Hydrogen gas burns in air $2K(s) + 2H_2O(l) \longrightarrow 2KOH(aq) + H_2(g)$
Sodium	- Reacts violently - Hydrogen formed may catch fire and explode $2Na(s) + 2H_2O(l) \longrightarrow 2NaOH(aq) + H_2(g)$
Calcium	- Reacts readily - Hydrogen gas formed $Ca(s) + 2H_2O(l) \longrightarrow Ca(OH)_2(aq) + H_2(g)$
Magnesium	- Reacts very slowly with cold water - A few bubbles of hydrogen gas produced only
Zinc Iron Lead Copper Silver	No reaction occurs

Reacting metals with solutions of other metal salts

Reaction of Metals with Metal Salt Solutions

A more reactive metal displaces a less reactive metal from its salt solution.
(Displacement reaction)

Magnesium displaces copper from copper sulphate solution.

Zinc displaces copper from copper sulphate solution.

Iron displaces copper from copper sulphate solution

Heat and electrical conductivity of Metals

Electrical conductivity of an aqueous solution of Sodium Chloride

Electrical Conductivity – in **aqueous** sodium chloride

Bulb lights up.

In molten or aqueous, ions are **free** to **move** about, thus carry charges to conduct electricity.

31

Refining of metals by electrolysis

ELECTROLYTIC REFINING

This method is use for refining of metal like silver, gold, copper, nickel etc.

Feedback and Remedial Teachings-

- Remedial Teaching method to be adopted for students who have fallen behind in studies.
- Retests, Assignment and practice Questions would be given for preparation

Inclusive Practice and Full Participation without Discrimination-

Lesson would be taught equally to all students without any discrimination. All students would be treated same irrespective of their economical status.

Sustainable Development Goals-

Through Teaching this lesson, may prepare students to gain the goal of decent work and economic growth as they came to know metallurgical process and uses of metals.

LESSON PLAN

CLASS-X SUBJECT-SCIENCE(CHEMISTRY)

Month -

August/October

Class Transaction-18 Periods

CARBON AND ITS

COMPOUNDS

Objectives-

Students will be able to

? understand covalent bond and its types and its formation

? know reasons behind its versatile nature

- ?differentiate between saturated and unsaturated compounds
- ?write isomers of butane and pentane
- ?know various functional groups that are present which are responsible for different chemical properties

Previous knowledge testing-

This lesson requires

- ?basic knowledge of structure of atom
- ?knowledge of allotropy and existence of carbon in various forms as diamond, graphite, black coal etc
- ?understand valence shell and writing electronic configuration
- ?knowledge of carbon and its compounds in our daily life as fabric, polymers etc
- ?requirement of combustion to take place
- ?examples of carbon compounds
- ?awareness regarding soaps and detergents

Vocabulary/Important spellings

? catenation, tetravalency, allotropy, fullerenes, covalent bond, combustion, IUPAC names, isomers, functional groups, homologous series, ethanol, soap, detergent

Innovative methods/Resources

? smart class, greenboard
? NCERT book, Pradeep's reference book
? Discussion, quiz, MCQ's etc

□ www.learnbse.in, byjus.com, [youtube](https://www.youtube.com)

procedure-

?
Class would start with a discussion on what type of compounds students observe around them.
?
they will notice that most of the things are made up of carbon. Versatile nature of carbon would be discussed.
? students would be told about covalent bonds, ionic bonds and allotropy of carbon * saturated and unsaturated carbon compounds would be discussed.
? students would be told about functional groups and homologous series. * IUPAC names would be taught to the students.

Student participation-

? students will be able to make electron dot structures of CH_4 , C_2H_4 , and other carbon compounds.
? they will be able to describe the process of oxidation, reduction, combustion, and hydrogenation of carbon compounds
?
they will be able to name carbon compounds according to IUPAC nomenclature
? they will be able to tell differences between soaps and detergents
?
they will be able to make structures of carbon compounds in the form of straight chain, rings and branches

Recapitulation/Assignment

?

Students would be able to recapitulate the nomenclature rules and give names of carbon compounds

?

assignment on difference between soap and detergent, saturated and unsaturated compounds, graphite and diamond, oxidation and reduction would be given to students.

? they will be able to explain cleaning action of soaps

Integration with other domains–

? Knowledge of structures of diamond, graphite etc integrate the topic with art and geometrical patterns. It can also be integrated with English language and mathematical concept of comparison.

Learning outcomes–

?

Students would be able to tell about covalent bonds, electronic dot structures, of various carbon compounds.

?

they will acquire knowledge of various industrial processes like oxidation, hydrogenation etc.

?

they will know the differences between soaps and detergents and which one is better for cleaning purposes.

?

students would be able to tell about various functional groups and how they can change the properties of a compound.

?

they can name and draw the structure of a carbon compound based on IUPAC nomenclature.

Coscholastic activities–

?

students will critically analyse and examine substances like graphite, ethanol, acetic acid etc.

?

they will appreciate the importance of ethanoic acid and perform activities in the lab.

?

this topic will help them in building character when they will discuss among themselves various topics of this chapter.

they will learn to prepare soap in chemistry lab by collaborating with each other.

Feedback/Remedial Teachings–

- Discussion and written practice of fill ups, Assertion Reasons, True/False, Matching Statements, Multiple choice Questions, one word Questions will be done
- Oral discussion and written tests will be conducted

Inclusive Practice and Full Participation without

Discrimination–

Lesson would be taught equally to all students without any discrimination. All students would be treated the same, regardless of their economical status.

Sustainable Development Goals-

By Teaching this Chapter, we may Proceed to the achieving the goal of clean water and sanitation as we will study types of water, cleansing action of

Soaps and detergents
